UC-005 Grow the ontology from candidates and requests

Grow the ontology from candidates and requests

Use case, reversed from the implementation at 0.3.0. Draft.

The solution in one sentence

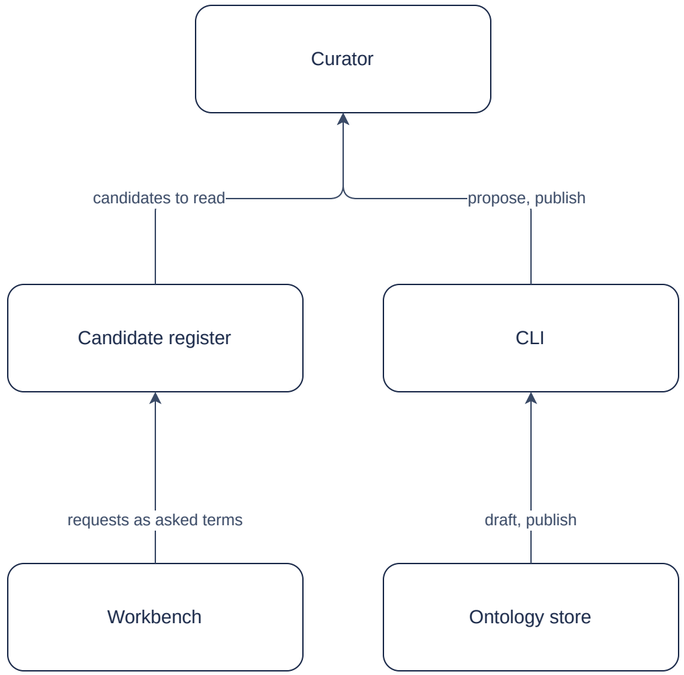

A curator takes the terms extraction could not place and the ontology requests kept from the workbench, and publishes them as the next minor version, so that the ontology grows from demand without a term entering it unread.

An ontology that cannot grow is abandoned; one that grows by itself drifts. Growth has to come from evidence (documents that named a term, questions that needed one) and pass through a person.

What is different afterwards

candidates --propose writes a revision draft one minor version up; the curator reviews and publishes; the next sweep runs a delta extraction of the new terms only.

The solution on one page

Generated from the Participants and Interactions tables with the model skill; `components.drawio` is the source.

Participants

Participant	Role in this use case	Kind
01 Curator	Decides what the next version holds	actor
02 Candidate register	Terms with their documents, evidence and nearest existing term	solution
03 Workbench	Gap reports kept as ontology requests	solution
04 CLI	candidates --propose; publish	solution
05 Ontology store	Drafts and versions	solution

Interactions

Interface	Provider	Consumer	Purpose
IF-01	02 Candidate register	01 Curator	candidates to read
IF-02	03 Workbench	02 Candidate register	requests as asked terms
IF-03	04 CLI	01 Curator	propose, publish
IF-04	05 Ontology store	04 CLI	draft, publish

Catalogue Mapping

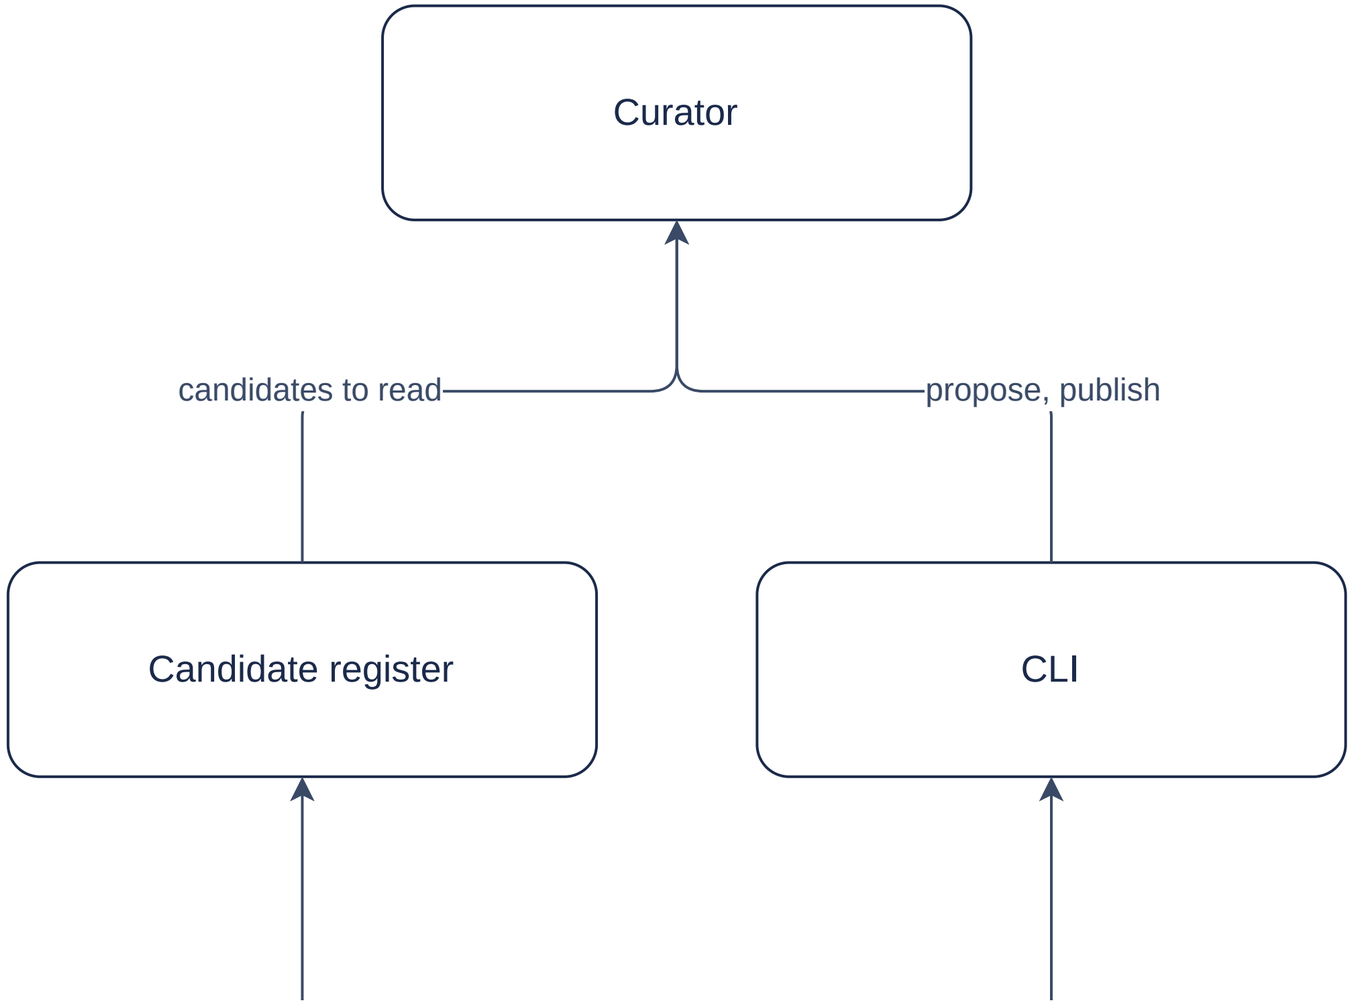

What each local participant stands for in the catalogue: an actor or an external system is a gap by design (no artefact of this catalogue realises a person or a vendor); a solution participant realises or partly realises a building block.

Local ID	Maps To	Relationship
01	gap	gap
02	ABB-002 Lake	partial
03	ABB-014 Answering agent	partial
04	ABB-028 Command line	realises
05	ABB-002 Lake	partial

The flow

UC-005 Grow the ontology from candidates and requests: scenarios

S1 Main success scenario

S1 Main success scenario

◀ Prev | Next ▶ | ▶ Play

Restart | Zoom to step: on

Arrow keys step, space plays

1. keep a "what would it take" report as an ontology request
2. run candidates --propose
3. keep terms with enough documents or a request, not covered by a synonym
4. consolidate with the current ontology held fixed; write the draft at the next minor version
5. pull, edit, diff; publish and activate
6. the next sweep extracts the delta for the selected documents

Data and measures

- The register: kind, term, documents, evidence, nearest, asked
- The revision draft and its warning when a change is semantic
