UC-004 Discover and curate an ontology from the documents

Discover and curate an ontology from the documents

Use case, reversed from the implementation at 0.3.0. Draft.

The solution in one sentence

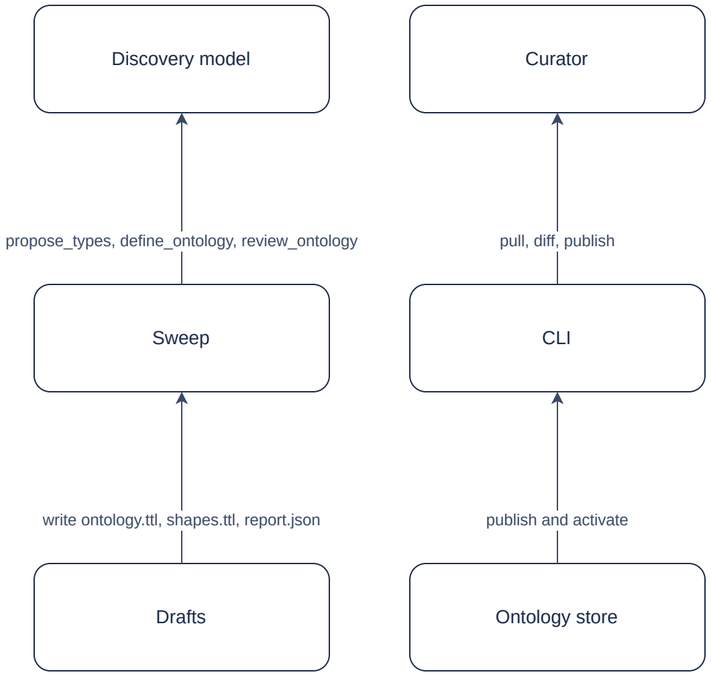

A curator lets the store propose a first ontology from a sample of the documents, reviews the draft in git, and publishes it as a version, so that a collection with no ontology gets one a person has read and approved.

Writing an ontology from nothing is slow; taking one a model wrote unread is unsafe. The draft has to carry its evidence and the curator has to be the one who publishes.

What is different afterwards

A draft with each term's document support and the review's applied and skipped edits; the curator pulls, edits, diffs and publishes 0.1.0, or in auto mode the sweep publishes it provisionally.

The solution on one page

Generated from the Participants and Interactions tables with the model skill; `components.drawio` is the source.

Participants

Participant	Role in this use case	Kind
01 Curator	Reads, edits, publishes	actor
02 Sweep	Samples, proposes, consolidates, reviews, writes the draft	solution
03 Discovery model	Proposes and reviews terms	external
04 Drafts	ontology/drafts/	solution
05 CLI	pull, diff, publish, activate	solution
06 Ontology store	Versions and the active pointer	solution

Interactions

Interface	Provider	Consumer	Purpose
IF-01	02 Sweep	03 Discovery model	propose_types, define_ontology, review_ontology
IF-02	04 Drafts	02 Sweep	write ontology.ttl, shapes.ttl, report.json
IF-03	05 CLI	01 Curator	pull, diff, publish
IF-04	06 Ontology store	05 CLI	publish and activate

Catalogue Mapping

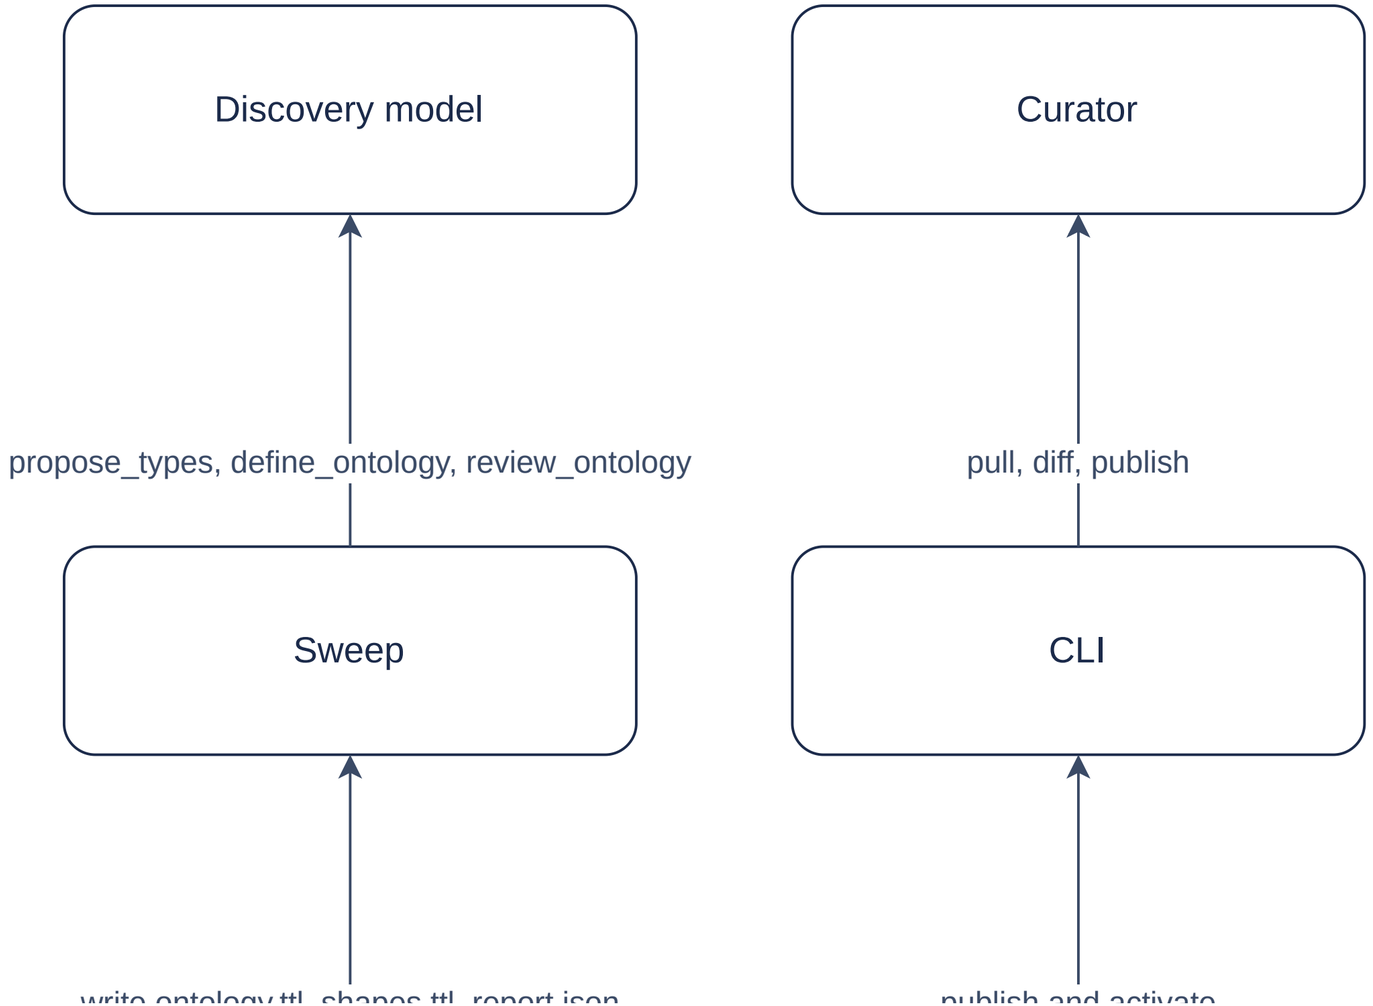

What each local participant stands for in the catalogue: an actor or an external system is a gap by design (no artefact of this catalogue realises a person or a vendor); a solution participant realises or partly realises a building block.

Local ID	Maps To	Relationship
01	gap	gap
02	ABB-024 Ingestion and extraction pipeline	realises
03	gap	gap
04	ABB-002 Lake	partial
05	ABB-028 Command line	realises
06	ABB-002 Lake	partial

The flow

UC-004 Discover and curate an ontology from the documents: scenarios

S1 Main success scenario | S2 Auto mode

S1 Main success scenario

◀ Prev | Next ▶ | ▶ Play

Restart | Zoom to step: on

Arrow keys step, space plays

1. propose classes, relations and attributes per sampled document, with grounded examples
2. consolidate to about fifteen classes with a hierarchy, domains, ranges and datatypes
3. review: parents, merges, drops, corrections, each with a reason
4. write the draft and its report; stop at awaiting curation
5. pull the draft, edit the Turtle, diff against nothing
6. publish 0.1.0 with --activate

Data and measures

- The sample, the proposals with support and stability, the consolidated draft, the review edits
